Acunetix by Invicti

Comprehensive Report

Acunetix Threat Level 3

One or more high-severity type vulnerabilities have been discovered by the scanner. A malicious user can exploit these vulnerabilities and compromise the backend database and/or deface your website.

Scan Detail

Target	bdlawsusa.ssbmultiservices.com
Scan Type	Full Scan
Start Time	Jan 1, 2024, 11:27:25 AM GMT+8
Scan Duration	4 hours, 53 minutes
Requests	434451
Average Response Time	33ms
Maximum Response Time	7660ms
Application Build	v23.7.230728157

Severity	Vulnerabilities	Instances
High	3	4
Medium	5	5
Low	10	11
Informational	9	11
Total	27	31

Informational

	Instances

Medium Severity

	Instances
Development configuration files	1
Directory listings	1
Laravel debug mode enabled	1
Others	2

High Severity

	Instances
Cross site scripting	2
Dotenv .env file	1
Vulnerable package dependencies [high]	1

Impacts

SEVERITY	IMPACT	
High	2	Cross site scripting
High	1	Dotenv .env file
High	1	Vulnerable package dependencies [high]
Medium	1	Development configuration files
Medium	1	Directory listings
Medium	1	Laravel debug mode enabled
Medium	1	Laravel log file publicly accessible
Medium	1	Vulnerable package dependencies [medium]
Low	1	Clickjacking: X-Frame-Options header
Low	1	Composer installed.json publicly accessible
Low	1	Cookies with missing, inconsistent or contradictory properties
Low	1	Cookies without HttpOnly flag set
Low	1	Cookies without Secure flag set
Low	1	Documentation files
Low	1	HTTP Strict Transport Security (HSTS) not implemented
Low	2	Insecure Inline Frame (iframe)
Low	1	Possible sensitive directories
Low	1	Possible sensitive files
Informational	1	Content Security Policy (CSP) not implemented
Informational	1	Content type is not specified
Informational	1	Email addresses

SEVERITY	IMPACT	
Informational	1	File uploads
Informational	3	Outdated JavaScript libraries
Informational	1	Permissions-Policy header not implemented
Informational	1	Possible server path disclosure (Unix)
Informational	1	Reverse proxy detected

Cross site scripting

Cross-site Scripting (XSS) refers to client-side code injection attack wherein an attacker can execute malicious scripts into a legitimate website or web application. XSS occurs when a web application makes use of unvalidated or unencoded user input within the output it generates.

Impact

Malicious JavaScript has access to all the same objects as the rest of the web page, including access to cookies and local storage, which are often used to store session tokens. If an attacker can obtain a user's session cookie, they can then impersonate that user.

Furthermore, JavaScript can read and make arbitrary modifications to the contents of a page being displayed to a user. Therefore, XSS in conjunction with some clever social engineering opens up a lot of possibilities for an attacker.

https://bdlawsusa.ssbmultiservices.com/index.php/subscribe-register-form

URL encoded GET input **plan** was set to **0 onmouseover=qx6t(97966) y=**

The input is reflected inside a tag parameter without quotes.

Request

```

Dotenv .env file

A dotenv file (**.env**) was found in this directory. Dotenv files are used to load environment variables from a .env file into the running process.

This file may expose sensitive information that could help a malicious user to prepare more advanced attacks. It's recommended to remove or restrict access to this type of files from production systems.

Impact

These files may disclose sensitive information. This information can be used to launch further attacks.

Recommendation

Remove or restrict access to all configuration files acessible from internet.

Vulnerable package dependencies [high]

One or more packages that are used in your web application are affected by known vulnerabilities. Please consult the details section for more information about each affected package.

Impact

The impact of this vulnerability is different for each vulnerable package. It's recommended to investigate each vulnerable package individually.

https://bdlawsusa.ssbmultiservices.com/

List of vulnerable **composer** packages:

Package: guzzlehttp/guzzle
Version: 7.4.0
CVE: CVE-2022-29248
Title: Reliance on Cookies without Validation and Integrity Checking
Description: Guzzle is a PHP HTTP client. Guzzle prior to versions 6.5.6 and 7.4.3 contains a vulnerability with the cookie middleware. The vulnerability is that it is not checked if the cookie domain equals the domain of the server which sets the cookie via the Set-Cookie header, allowing a malicious server to set cookies for unrelated domains. The cookie middleware is disabled by default, so most library consumers will not be affected by this issue. Only those who manually add the cookie middleware to the handler stack or construct the client with ['cookies' => true] are affected. Moreover, those who do not use the same Guzzle client to call multiple domains and have disabled redirect forwarding are not affected by this vulnerability. Guzzle versions 6.5.6 and 7.4.3 contain a patch for this issue. As a workaround, turn off the cookie middleware.
CVSS V2: AV:N/AC:M/Au:N/C:P/I:P/A:N
CVSS V3: CVSS:3.1/AV:N/AC:L/PR:N/UI:R/S:U/C:H/I:H/A:N
CWE: CWE-565

Package: guzzlehttp/guzzle
Version: 7.4.0
CVE: CVE-2022-31043
Title: Improper Removal of Sensitive Information Before Storage or Transfer
Description: Guzzle is an open source PHP HTTP client. In affected versions `Authorization` headers on requests are sensitive information. On making a request using the `https` scheme to a server which responds with a redirect to a URI with the `http` scheme, we should not forward the `Authorization` header on. This is much the same as to how we don't forward on the header if the host changes. Prior to this fix, `https` to `http` downgrades did not result in the `Authorization` header being removed, only changes to the host. Affected Guzzle 7 users should upgrade to Guzzle 7.4.4 as soon as possible. Affected users using any earlier series of Guzzle should upgrade to Guzzle 6.5.7 or 7.4.4. Users unable to upgrade may consider an alternative approach which would be to use their own redirect middleware. Alternately users may simply disable redirects all together if redirects are not expected or required.
CVSS V2: AV:N/AC:L/Au:N/C:P/I:N/A:N

Package: guzzlehttp/guzzle
Version: 7.4.0
CVE: CVE-2022-31091
Title: Exposure of Sensitive Information to an Unauthorized Actor
Description: Guzzle, an extensible PHP HTTP client. `Authorization` and `Cookie` headers on requests are sensitive information. In affected versions on making a request which responds with a redirect to a URI with a different port, if we choose to follow it, we should remove the `Authorization` and `Cookie` headers from the request, before containing. Previously, we would only consider a change in host or scheme. Affected Guzzle 7 users should upgrade to Guzzle 7.4.5 as soon as possible. Affected users using any earlier series of Guzzle should upgrade to Guzzle 6.5.8 or 7.4.5. Note that a partial fix was implemented in Guzzle 7.4.2, where a change in host would trigger removal of the curl-added Authorization header, however this earlier fix did not cover change in scheme or change in port. An alternative approach would be to use your own redirect middleware, rather than ours, if you are unable to upgrade. If you do not require or expect redirects to be followed, one should simply disable redirects all together.

Package: guzzlehttp/guzzle
Version: 7.4.0
CVE: CVE-2022-31090
Title: Improper Removal of Sensitive Information Before Storage or Transfer
Description: Guzzle, an extensible PHP HTTP client. `Authorization` headers on requests are sensitive information. In affected versions when using our Curl handler, it is possible to use the `CURLOPT_HTTPAUTH` option to specify an `Authorization` header. On making a request which responds with a redirect to a URI with a different origin (change in host, scheme or port), if we choose to follow it, we should remove the `CURLOPT_HTTPAUTH` option before continuing, stopping curl from appending the `Authorization` header to the new request. Affected Guzzle 7 users should upgrade to Guzzle 7.4.5 as soon as possible. Affected users using any earlier series of Guzzle should upgrade to Guzzle 6.5.8 or 7.4.5. Note that a partial fix was implemented in Guzzle 7.4.2, where a change in host would trigger removal of the curl-added Authorization header, however this earlier fix did not cover change in scheme or change in port. If you do not require or expect redirects to be followed, one should simply disable redirects all together. Alternatively, one can specify to use the Guzzle steam handler backend, rather than curl.

Package: guzzlehttp/guzzle
Version: 7.4.0
CVE: CVE-2022-31042
Title: Improper Removal of Sensitive Information Before Storage or Transfer
Description: Guzzle is an open source PHP HTTP client. In affected versions the `Cookie` headers on requests are sensitive information. On making a request using the `https` scheme to a server which responds with a redirect to a URI with the `http` scheme, or on making a request to a server which responds with a redirect to a a URI to a different host, we should not forward the `Cookie` header on. Prior to this fix, only cookies that were managed by our cookie middleware would be safely removed, and any `Cookie` header manually added to the initial request would not be stripped. We now always strip it, and allow the cookie middleware to re-add any cookies that it deems should be there. Affected Guzzle 7 users should upgrade to Guzzle 7.4.4 as soon as possible. Affected users using any earlier series of Guzzle should upgrade to Guzzle 6.5.7 or 7.4.4. Users unable to upgrade may consider an alternative approach to use your own redirect middleware, rather than ours. If you do not require or expect redirects to be followed, one should simply disable redirects all together.

Package: guzzlehttp/psr7
Version: 2.1.0
CVE: CVE-2022-24775
Title: Improper Input Validation
Description: guzzlehttp/psr7 is a PSR-7 HTTP message library. Versions prior to 1.8.4 and 2.1.1 are vulnerable to improper header parsing. An attacker could sneak in a new line character and pass untrusted values. The issue is patched in 1.8.4 and 2.1.1. There are currently no known workarounds.
CVSS V2: AV:N/AC:L/Au:N/C:N/I:P/A:N

Package: guzzlehttp/psr7
Version: 2.1.0
CVE: CVE-2023-29197
Title: Interpretation Conflict
Description: guzzlehttp/psr7 is a PSR-7 HTTP message library implementation in PHP. Affected versions are subject to improper header parsing. An attacker could sneak in a newline (\n) into both the header names and values. While the specification states that \r\n\r\n is used to terminate the header list, many servers in the wild will also accept \n\n. This is a follow-up to CVE-2022-24775 where the fix was incomplete. The issue has been patched in versions 1.9.1 and 2.4.5. There are no known workarounds for this vulnerability. Users are advised to upgrade.

Package: symfony/http-kernel
Version: 5.3.10
CVE: CVE-2022-24894
Title: Improper Authorization
Description: Symfony is a PHP framework for web and console applications and a set of reusable PHP components. The Symfony HTTP cache system, acts as a reverse proxy: It caches entire responses (including headers) and returns them to the clients. In a recent change in the `AbstractSessionListener`, the response might contain a `Set-Cookie` header. If the Symfony HTTP cache system is enabled, this response might bill stored and return to the next clients. An attacker can use this vulnerability to retrieve the victim's session. This issue has been patched and is available for branch 4.4.

Recommendation

It's recommended to update the vulnerable packages to the latest version (if a fix exists). If a fix does not exist, you may want to suggest changes that address the vulnerability to the package maintainer or remove the package from your dependency tree.

Development configuration files

One or more configuration files (e.g. Vagrantfile, Gemfile, Rakefile, ...) were found. These files may expose sensitive information that could help a malicious user to prepare more advanced attacks. It's recommended to remove or restrict access to this type of files from production systems.

Impact

These files may disclose sensitive information. This information can be used to launch further attacks.

https://bdlawsusa.ssbmultiservices.com/

Development configuration files:

- https://bdlawsusa.ssbmultiservices.com/**package.json**

  ```
  package.json => Grunt configuration file. Grunt is a JavaScript task runner.
  ```

- https://bdlawsusa.ssbmultiservices.com/**composer.json**

  ```
  composer.json => Composer configuration file. Composer is a dependency manager
  for PHP.
  ```

- https://bdlawsusa.ssbmultiservices.com/**composer.lock**

  ```
  composer.lock => Composer lock file. Composer is a dependency manager for PHP.
  ```

- https://bdlawsusa.ssbmultiservices.com/**package-lock.json**

  ```
  package-lock.json => npm file. This file keeps track of the exact version of
  every package that is installed.
  ```

- https://bdlawsusa.ssbmultiservices.com/**docker-compose.yml**

  ```
  docker-compose.yml => Docker Compose configuration file. Docker Compose is a tool
  for defining and running multi-container Docker applications.
  ```

Recommendation

Remove or restrict access to all configuration files acessible from internet.

Directory listings

Directory listing is a web server function that displays the directory contents when there is no index file in a specific website directory. It is dangerous to leave this function turned on for the web server because it leads to information disclosure.

Impact

A user can view a list of all files from the affected directories possibly exposing sensitive information.

Laravel log file publicly accessible

Laravel is a popular PHP web application framework. A publicly accessble Laravel log file (**/storage/logs/laravel.log**) was found in this directory.

This file may expose sensitive information that could help a malicious user to prepare more advanced attacks. It's recommended to remove or restrict access to this type of files from production systems.

Impact

The Laravel log file may disclose sensitive information. This information can be used to launch further attacks.

https://bdlawsusa.ssbmultiservices.com/

Request

```

Vulnerable package dependencies [medium]

One or more packages that are used in your web application are affected by known vulnerabilities. Please consult the details section for more information about each affected package.

Impact

The impact of this vulnerability is different for each vulnerable package. It's recommended to investigate each vulnerable package individually.

https://bdlawsusa.ssbmultiservices.com/

List of vulnerable **composer** packages:

Package: laravel/framework
Version: 8.70.2
CVE: CVE-2021-43808
Title: Use of a Broken or Risky Cryptographic Algorithm
Description: Laravel is a web application framework. Laravel prior to versions 8.75.0, 7.30.6, and 6.20.42 contain a possible cross-site scripting (XSS) vulnerability in the Blade templating engine. A broken HTML element may be clicked and the user taken to another location in their browser due to XSS. This is due to the user being able to guess the parent placeholder SHA-1 hash by trying common names of sections. If the parent template contains an exploitable HTML structure an XSS vulnerability can be exposed. This vulnerability has been patched in versions 8.75.0, 7.30.6, and 6.20.42 by determining the parent placeholder at runtime and using a random hash that is unique to each request.
CVSS V2: AV:N/AC:M/Au:N/C:N/I:P/A:N
CVSS V3: CVSS:3.1/AV:N/AC:L/PR:N/UI:R/S:C/C:L/I:L/A:N
CWE: CWE-327

- https://github.com/laravel/framework/releases/tag/v8.75.0

Package: symfony/http-kernel
Version: 5.3.10
CVE: CVE-2021-41267
Title: Inconsistent Interpretation of HTTP Requests ('HTTP Request Smuggling')
Description: Symfony/Http-Kernel is the HTTP kernel component for Symfony, a PHP framework for web and console applications and a set of reusable PHP components. Headers that are not part of the "trusted_headers" allowed list

are ignored and protect users from "Cache poisoning" attacks. In Symfony 5.2, maintainers added support for the `X-Forwarded-Prefix` headers, but this header was accessible in SubRequest, even if it was not part of the "trusted_headers" allowed list. An attacker could leverage this opportunity to forge requests containing a `X-Forwarded-Prefix` header, leading to a web cache poisoning issue. Versions 5.3.12 and later have a patch to ensure that the `X-Forwarded-Prefix` header is not forwarded to subrequests when it is not trusted.

CVSS V2: AV:N/AC:M/Au:N/C:N/I:P/A:N

CVSS V3: CVSS:3.1/AV:N/AC:L/PR:N/UI:R/S:U/C:N/I:H/A:N

CWE: CWE-444

References:

- https://github.com/symfony/symfony/security/advisories/GHSA-q3j3-w37x-hq2q
- https://github.com/symfony/symfony/releases/tag/v5.3.12

- https://github.com/symfony/symfony/pull/44243

Recommendation

It's recommended to update the vulnerable packages to the latest version (if a fix exists). If a fix does not exist, you may want to suggest changes that address the vulnerability to the package maintainer or remove the package from your dependency tree.

Clickjacking: X-Frame-Options header

Clickjacking (User Interface redress attack, UI redress attack, UI redressing) is a malicious technique of tricking a Web user into clicking on something different from what the user perceives they are clicking on, thus potentially revealing confidential information or taking control of their computer while clicking on seemingly innocuous web pages.

The server did not return an **X-Frame-Options** header with the value DENY or SAMEORIGIN, which means that this website could be at risk of a clickjacking attack. The X-Frame-Options HTTP response header can be used to indicate whether or not a browser should be allowed to render a page inside a frame or iframe. Sites can use this to avoid clickjacking attacks, by ensuring that their content is not embedded into untrusted sites.

Impact

The impact depends on the affected web application.

Composer installed.json publicly accessible

A **installed.json** file was discovered. Composer is a tool for dependency management in PHP. It allows you to declare the libraries your project depends on and it will manage (install/update) them for you. After installing the dependencies, Composer stores the list of them in a special file for internal purposes.

As the file is publicly accessible, it leads to disclosure of information about components used by the web application.

Impact

installed.json discloses sensitive information. This information can be used to launch further attacks.

https://bdlawsusa.ssbmultiservices.com/vendor/

Request

```

Cookies with missing, inconsistent or contradictory properties

At least one of the following cookies properties causes the cookie to be invalid or incompatible with either a different property of the same cookie, of with the environment the cookie is being used in. Although this is not a vulnerability in itself, it will likely lead to unexpected behavior by the application, which in turn may cause secondary security issues.

Impact

Cookies will not be stored, or submitted, by web browsers.

Cookies without HttpOnly flag set

One or more cookies don't have the HttpOnly flag set. When a cookie is set with the HttpOnly flag, it instructs the browser that the cookie can only be accessed by the server and not by client-side scripts. This is an important security protection for session cookies.

Impact

Cookies can be accessed by client-side scripts.

Recommendation

If possible, you should set the HttpOnly flag for these cookies.

Cookies without Secure flag set

One or more cookies does not have the Secure flag set. When a cookie is set with the Secure flag, it instructs the browser that the cookie can only be accessed over secure SSL/TLS channels. This is an important security protection for session cookies.

Impact

Cookies could be sent over unencrypted channels.

https://bdlawsusa.ssbmultiservices.com/ Verified

Recommendation

If possible, you should set the Secure flag for these cookies.

Documentation files

One or more documentation files (e.g. readme.txt, changelog.txt, ...) were found. The information contained in these files could help an attacker identify the web application you are using and sometimes

the version of the application. It's recommended to remove these files from production systems.

Impact

These files may disclose sensitive information. This information can be used to launch further attacks.

```

Recommendation

Remove or restrict access to all documentation file acessible from internet.

HTTP Strict Transport Security (HSTS) not implemented

HTTP Strict Transport Security (HSTS) tells a browser that a web site is only accessable using HTTPS. It was detected that your web application doesn't implement HTTP Strict Transport Security (HSTS) as the Strict Transport Security header is missing from the response.

Impact

HSTS can be used to prevent and/or mitigate some types of man-in-the-middle (MitM) attacks

https://bdlawsusa.ssbmultiservices.com/

URLs where HSTS is not enabled:

Strict-Transport-Security
https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Strict-Transport-Security

Insecure Inline Frame (iframe)

The web page was found to be using an Inline Frame ("iframe") to embed a resource, such as a different web page. The Inline Frame is either configured insecurely, or not as securely as expected. This vulnerability alert is based on the origin of the embedded resource and the iframe's sandbox attribute, which can be used to apply security restrictions as well as exceptions to these restrictions.

Impact

When a web page uses an insecurely configured iframe to embed another web page, the latter may manipulate the former, and trick its visitors into performing unwanted actions.

https://bdlawsusa.ssbmultiservices.com/ Verified

An iframe tag references an external resource, and no sandbox attribute is set.

Request

```
GET / HTTP/1.1
Referer: https://bdlawsusa.ssbmultiservices.com/
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8
Accept-Encoding: gzip,deflate,br
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko)

Content Security Policy (CSP) not implemented

Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks.

Content Security Policy (CSP) can be implemented by adding a **Content-Security-Policy** header. The value of this header is a string containing the policy directives describing your Content Security Policy. To implement CSP, you should define lists of allowed origins for the all of the types of resources that your site utilizes. For example, if you have a simple site that needs to load scripts, stylesheets, and images hosted locally, as well as from the jQuery library from their CDN, the CSP header could look like the following:

```
Content-Security-Policy:
default-src 'self';
script-src 'self' https://code.jquery.com;
```

It was detected that your web application doesn't implement Content Security Policy (CSP) as the CSP header is missing from the response. It's recommended to implement Content Security Policy (CSP) into your web application.

Impact

CSP can be used to prevent and/or mitigate attacks that involve content/code injection, such as cross-site scripting/XSS attacks, attacks that require embedding a malicious resource, attacks that involve malicious use of iframes, such as clickjacking attacks, and others.

https://bdlawsusa.ssbmultiservices.com/

Paths without CSP header:

- https://bdlawsusa.ssbmultiservices.com/general-member
- https://bdlawsusa.ssbmultiservices.com/notice-detailes/3
- https://bdlawsusa.ssbmultiservices.com/membership-renew

Request

```
GET / HTTP/1.1
Referer: https://bdlawsusa.ssbmultiservices.com/
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8
Accept-Encoding: gzip,deflate,br
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko)
Chrome/114.0.0.0 Safari/537.36
Host: bdlawsusa.ssbmultiservices.com
Connection: Keep-alive
```

Recommendation

It's recommended to implement Content Security Policy (CSP) into your web application. Configuring Content Security Policy involves adding the **Content-Security-Policy** HTTP header to a web page and giving it values to control resources the user agent is allowed to load for that page.

```

Recommendation

Set a Content-Type header value for these page(s).

Email addresses

One or more email addresses have been found on this website. The majority of spam comes from email addresses harvested off the internet. The spam-bots (also known as email harvesters and email extractors) are programs that scour the internet looking for email addresses on any website they come across. Spambot programs look for strings like myname@mydomain.com and then record any addresses found.

Impact

Email addresses posted on Web sites may attract spam.

File uploads

These pages allows visitors to upload files to the server. Various web applications allow users to upload files (such as pictures, images, sounds, ...). Uploaded files may pose a significant risk if not handled correctly. A remote attacker could send a multipart/form-data POST request with a specially-crafted filename or mime type and execute arbitrary code.

Impact

If the uploaded files are not safely checked an attacker may upload malicious files.

Chrome/114.0.0.0 Safari/537.36
Host: bdlawsusa.ssbmultiservices.com
Connection: Keep-alive
```

Recommendation

Restrict file types accepted for upload: check the file extension and only allow certain files to be uploaded. Use a whitelist approach instead of a blacklist. Check for double extensions such as .php.png. Check for files without a filename like .htaccess (on ASP.NET, check for configuration files like web.config). Change the permissions on the upload folder so the files within it are not executable. If possible, rename the files that are uploaded.

Outdated JavaScript libraries

You are using an outdated version of one or more JavaScript libraries. A more recent version is available. Although your version was not found to be affected by any security vulnerabilities, it is recommended to keep libraries up to date.

Impact

Consult References for more information.

Reverse proxy detected

This server uses a reverse proxy, a load balancer or a CDN (Content Delivery Network) or it's hosted in a cloud provider. Acunetix detected this by sending various payloads and detecting changes in headers and body.

Impact

No impact is associated with this vulnerability.

https://bdlawsusa.ssbmultiservices.com/

Detected reverse proxy: Apache httpd

Request

```
GET / HTTP/1.1

Chrome/114.0.0.0 Safari/537.36
Host: bdlawsusa.ssbmultiservices.com
Connection: Keep-alive
```

Recommendation

None

Subresource Integrity (SRI) not implemented

Subresource Integrity (SRI) is a security feature that enables browsers to verify that third-party resources they fetch (for example, from a CDN) are delivered without unexpected manipulation. It works by allowing developers to provide a cryptographic hash that a fetched file must match.

Third-party resources (such as scripts and stylesheets) can be manipulated. An attacker that has access or has hacked the hosting CDN can manipulate or replace the files. SRI allows developers to specify a base64-encoded cryptographic hash of the resource to be loaded. The integrity attribute containing the hash is then added to the <script> HTML element tag. The integrity string consists of a base64-encoded hash, followed by a prefix that depends on the hash algorithm. This prefix can either be sha256, sha384 or sha512.

The script loaded from the external URL specified in the Details section doesn't implement Subresource Integrity (SRI). It's recommended to implement Subresource Integrity (SRI) for all the scripts loaded from external hosts.

Impact

An attacker that has access or has hacked the hosting CDN can manipulate or replace the files.

https://bdlawsusa.ssbmultiservices.com/

Pages where SRI is not implemented:

- https://bdlawsusa.ssbmultiservices.com/
  Script SRC: **https://ajax.googleapis.com/ajax/libs/jquery/3.5.1/jquery.min.js**

- https://bdlawsusa.ssbmultiservices.com/
  Script SRC: **https://www.jqueryscript.net/demo/Text-Scrolling-Plugin-for-jQuery-Marquee/jquery.marquee.js?v=3**

Request

```
GET / HTTP/1.1
Referer: https://bdlawsusa.ssbmultiservices.com/
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8
Accept-Encoding: gzip,deflate,br
```

```
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko)
Chrome/114.0.0.0 Safari/537.36
Host: bdlawsusa.ssbmultiservices.com
Connection: Keep-alive
```

Recommendation

Use the SRI Hash Generator link (from the References section) to generate a <script> element that implements Subresource Integrity (SRI).

For example, you can use the following <script> element to tell a browser that before executing the https://example.com/example-framework.js script, the browser must first compare the script to the expected hash, and verify that there's a match.

```
<script src="https://example.com/example-framework.js"
integrity="sha384-oqVuAfXRKap7fdgcCY5uykM6+R9GqQ8K/uxy9rx7HNQlGYl1kPzQho1wx4JwY8wC"
crossorigin="anonymous"></script>
```
