

Comprehensive Report

Acunetix Threat Level 3

One or more high-severity type vulnerabilities have been discovered by the scanner. A malicious user can exploit these vulnerabilities and compromise the backend database and/or deface your website.

Scan Detail

Target	app-globaltaxnyc.ssbbmultiservices.com
Scan Type	Full Scan
Start Time	Feb 7, 2024, 9:43:06 PM GMT+8
Scan Duration	2 hours, 13 minutes
Requests	811814
Average Response Time	33ms
Maximum Response Time	29524ms
Application Build	v23.7.230728157

Impacts

SEVERITY	IMPACT
! High	1 Possible database backup
! Medium	1 Directory listings
! Medium	4 Vulnerable JavaScript libraries
! Low	1 Clickjacking: X-Frame-Options header
! Low	1 Cookies without HttpOnly flag set
! Low	1 Cookies without Secure flag set
! Low	1 HTTP Strict Transport Security (HSTS) not implemented
! Low	1 Possible sensitive directories
! Low	1 Possible sensitive files
i Informational	1 Content Security Policy (CSP) not implemented
i Informational	1 Content type is not specified
i Informational	1 Email addresses
i Informational	1 HTTP Strict Transport Security (HSTS) not following best practices
i Informational	8 Outdated JavaScript libraries
i Informational	1 Permissions-Policy header not implemented
i Informational	1 Reverse proxy detected
i Informational	1 Subresource Integrity (SRI) not implemented

Possible database backup

Manual confirmation is required for this alert.

One or more possible database backups were identified. A database backup contains a record of the table structure and/or the data from a database and is usually in the form of a list of SQL statements. A database backup is most often used for backing up a database so that its contents can be restored in the event of data loss. This information is highly sensitive and should never be found on a production system.

Impact

These file(s) may disclose sensitive information. This information can be used to launch further attacks.

<https://app-globaltaxnyc.ssbbmultiservices.com/>

Pages with possible database backups:

-

Request

```
GET /app-globaltaxnyc.ssbbmultiservices.com.zip HTTP/1.1
Range: bytes=0-99999
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8
Accept-Encoding: gzip,deflate,br
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko)
Chrome/114.0.0.0 Safari/537.36
Host: app-globaltaxnyc.ssbbmultiservices.com
Connection: Keep-alive
```

Recommendation

Sensitive files such as database backups should never be stored in a directory that is accessible to the web server. As a workaround, you could restrict access to these file(s).

Directory listings

Directory listing is a web server function that displays the directory contents when there is no index file in a specific website directory. It is dangerous to leave this function turned on for the web server because it leads to information disclosure.

Impact

A user can view a list of all files from the affected directories possibly exposing sensitive information.

```

Recommendation

You should make sure no sensitive information is disclosed or you may want to restrict directory listings from the web server configuration.

Vulnerable JavaScript libraries

You are using one or more vulnerable JavaScript libraries. One or more vulnerabilities were reported for this version of the library. Consult Attack details and Web References for more information about the affected library and the vulnerabilities that were reported.

Impact

Consult References for more information.

Recommendation

Upgrade to the latest version.

Clickjacking: X-Frame-Options header

Clickjacking (User Interface redress attack, UI redress attack, UI redressing) is a malicious technique of tricking a Web user into clicking on something different from what the user perceives they are clicking on, thus potentially revealing confidential information or taking control of their computer while clicking on seemingly innocuous web pages.

The server did not return an **X-Frame-Options** header with the value DENY or SAMEORIGIN, which means that this website could be at risk of a clickjacking attack. The X-Frame-Options HTTP response header can be used to indicate whether or not a browser should be allowed to render a page inside a frame or iframe.

Sites can use this to avoid clickjacking attacks, by ensuring that their content is not embedded into untrusted sites.

Impact

The impact depends on the affected web application.

Cookies without HttpOnly flag set

One or more cookies don't have the HttpOnly flag set. When a cookie is set with the HttpOnly flag, it instructs the browser that the cookie can only be accessed by the server and not by client-side scripts. This is an important security protection for session cookies.

Impact

Cookies can be accessed by client-side scripts.

Recommendation

If possible, you should set the HttpOnly flag for these cookies.

Cookies without Secure flag set

One or more cookies does not have the Secure flag set. When a cookie is set with the Secure flag, it instructs the browser that the cookie can only be accessed over secure SSL/TLS channels. This is an important security protection for session cookies.

Impact

Cookies could be sent over unencrypted channels.

<https://app-globaltaxnyc.ssbbmultiservices.com/>

Verified

Cookies without Secure flag set:

Recommendation

If possible, you should set the Secure flag for these cookies.

HTTP Strict Transport Security (HSTS) not implemented

HTTP Strict Transport Security (HSTS) tells a browser that a web site is only accessible using HTTPS. It was detected that your web application doesn't implement HTTP Strict Transport Security (HSTS) as the Strict Transport Security header is missing from the response.

Impact

HSTS can be used to prevent and/or mitigate some types of man-in-the-middle (MitM) attacks

<https://app-globaltaxnyc.ssbbmultiservices.com/>

URLs where HSTS is not enabled:

Possible sensitive directories

One or more possibly sensitive directories were found. These resources are not directly linked from the website. This check looks for common sensitive resources like backup directories, database dumps, administration pages, temporary directories. Each one of these directories could help an attacker to learn more about his target.

Impact

These directories may expose sensitive information that could help a malicious user to prepare more advanced attacks.

<https://app-globaltaxnyc.ssbbmultiservices.com/>

Possible sensitive directories:

Content Security Policy (CSP) not implemented

Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks.

Content Security Policy (CSP) can be implemented by adding a **Content-Security-Policy** header. The value of this header is a string containing the policy directives describing your Content Security Policy. To implement CSP, you should define lists of allowed origins for all of the types of resources that your site utilizes. For example, if you have a simple site that needs to load scripts, stylesheets, and images hosted locally, as well as from the jQuery library from their CDN, the CSP header could look like the following:

Content-Security-Policy:

```
default-src 'self';
script-src 'self' https://code.jquery.com;
```

It was detected that your web application doesn't implement Content Security Policy (CSP) as the CSP header is missing from the response. It's recommended to implement Content Security Policy (CSP) into your web application.

Impact

CSP can be used to prevent and/or mitigate attacks that involve content/code injection, such as cross-site scripting/XSS attacks, attacks that require embedding a malicious resource, attacks that involve malicious use of iframes, such as clickjacking attacks, and others.

Connection: Keep-alive
```

Recommendation

It's recommended to implement Content Security Policy (CSP) into your web application. Configuring Content Security Policy involves adding the **Content-Security-Policy** HTTP header to a web page and giving it values to control resources the user agent is allowed to load for that page.

References

[Content Security Policy \(CSP\)](#)

<https://developer.mozilla.org/en-US/docs/Web/HTTP/CSP>

[Implementing Content Security Policy](#)

<https://hacks.mozilla.org/2016/02/implementing-content-security-policy/>

Content type is not specified

These page(s) does not set a Content-Type header value. This value informs the browser what kind of data to expect. If this header is missing, the browser may incorrectly handle the data. This could lead to

security problems.

Impact

None

<https://app-globaltaxnyc.ssbbmultiservices.com/>

Verified

Pages where the content-type header is not specified:

- <https://app-globaltaxnyc.ssbbmultiservices.com/public/web.config>

Request

```

Chrome/114.0.0.0 Safari/537.36
Host: app-globaltaxnyc.ssbbmultiservices.com
Connection: Keep-alive
```

Recommendation

Set a Content-Type header value for these page(s).

Email addresses

One or more email addresses have been found on this website. The majority of spam comes from email addresses harvested off the internet. The spam-bots (also known as email harvesters and email extractors) are programs that scour the internet looking for email addresses on any website they come across. Spambot programs look for strings like myname@mydomain.com and then record any addresses found.

Impact

Email addresses posted on Web sites may attract spam.

<https://app-globaltaxnyc.ssbbmultiservices.com/>

HTTP Strict Transport Security (HSTS) not following best practices

HTTP Strict Transport Security (HSTS) instructs a web browser to only connect to a web site using HTTPS. It was detected that your web application's HTTP Strict Transport Security (HSTS) implementation is not as strict as is typically advisable.

Impact

HSTS can be used to prevent and/or mitigate some types of man-in-the-middle (MitM) attacks

<https://app-globaltaxnyc.ssbbmultiservices.com/>

URLs where HSTS configuration is not according to best practices:

- <https://app-globaltaxnyc.ssbbmultiservices.com/> - max-age is less than 1 year (31536000);
- <https://app-globaltaxnyc.ssbbmultiservices.com/appointment/save-service> - max-age is less than 1 year (31536000);
- <https://app-globaltaxnyc.ssbbmultiservices.com/login> - max-age is less than 1 year (31536000);
- <https://app-globaltaxnyc.ssbbmultiservices.com/index.php> - max-age is less than 1 year (31536000);
- <https://app-globaltaxnyc.ssbbmultiservices.com/register> - max-age is less than 1 year (31536000);
- <https://app-globaltaxnyc.ssbbmultiservices.com/index.php/login> - max-age is less than 1 year (31536000);
- <https://app-globaltaxnyc.ssbbmultiservices.com/index.php/register> - max-age is less than 1 year (31536000);

Request

```
GET / HTTP/1.1
Referer: https://app-globaltaxnyc.ssbbmultiservices.com/
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8
Accept-Encoding: gzip,deflate,br
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko)
Chrome/114.0.0.0 Safari/537.36
Host: app-globaltaxnyc.ssbbmultiservices.com
Connection: Keep-alive
```

Recommendation

It is recommended to implement best practices of HTTP Strict Transport Security (HSTS) in your web application. Consult web references for more information.

Outdated JavaScript libraries

You are using an outdated version of one or more JavaScript libraries. A more recent version is available. Although your version was not found to be affected by any security vulnerabilities, it is recommended to keep libraries up to date.

Impact

Consult References for more information.

Reverse proxy detected

This server uses a reverse proxy, a load balancer or a CDN (Content Delivery Network) or it's hosted in a cloud provider. Acunetix detected this by sending various payloads and detecting changes in headers and body.

Impact

No impact is associated with this vulnerability.

<https://app-globaltaxnyc.ssbbmultiservices.com/>

Detected reverse proxy: Apache httpd

Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8
Accept-Encoding: gzip,deflate,br
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko)
Chrome/114.0.0.0 Safari/537.36
Host: app-globaltaxnyc.ssbbmultiservices.com
Connection: Keep-alive
```

Recommendation

None

Subresource Integrity (SRI) not implemented

Subresource Integrity (SRI) is a security feature that enables browsers to verify that third-party resources they fetch (for example, from a CDN) are delivered without unexpected manipulation. It works by allowing developers to provide a cryptographic hash that a fetched file must match.

Third-party resources (such as scripts and stylesheets) can be manipulated. An attacker that has access or has hacked the hosting CDN can manipulate or replace the files. SRI allows developers to specify a base64-encoded cryptographic hash of the resource to be loaded. The integrity attribute containing the hash is then added to the <script> HTML element tag. The integrity string consists of a base64-encoded

hash, followed by a prefix that depends on the hash algorithm. This prefix can either be sha256, sha384 or sha512.

The script loaded from the external URL specified in the Details section doesn't implement Subresource Integrity (SRI). It's recommended to implement Subresource Integrity (SRI) for all the scripts loaded from external hosts.

Impact

An attacker that has access or has hacked the hosting CDN can manipulate or replace the files.

<https://app-globaltaxnyc.ssbbmultiservices.com/>

Pages where SRI is not implemented:

- https://app-globaltaxnyc.ssbbmultiservices.com/
Script SRC: <https://cdnjs.cloudflare.com/ajax/libs/intl-tel-input/11.0.9/js/intlTelInput.js>

Request

```
GET / HTTP/1.1
Referer: https://app-globaltaxnyc.ssbbmultiservices.com/
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8
Accept-Encoding: gzip,deflate,br
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko)
Chrome/114.0.0.0 Safari/537.36
Host: app-globaltaxnyc.ssbbmultiservices.com
Connection: Keep-alive
```

Recommendation

Use the SRI Hash Generator link (from the References section) to generate a <script> element that implements Subresource Integrity (SRI).

For example, you can use the following <script> element to tell a browser that before executing the https://example.com/example-framework.js script, the browser must first compare the script to the expected hash, and verify that there's a match.

```
<script src="https://example.com/example-framework.js"
integrity="sha384-oqVuAfXRKap7fdgcCY5uykM6+R9GqQ8K/uxy9rx7HNQlGYl1kPzQho1wx4JwY8wC"
crossorigin="anonymous"></script>
```
