

Comprehensive Report

Acunetix Threat Level 3

One or more high-severity type vulnerabilities have been discovered by the scanner. A malicious user can exploit these vulnerabilities and compromise the backend database and/or deface your website.

Scan Detail

Target	habigonjzilasamiti.ssbmultiservices.com
Scan Type	Full Scan
Start Time	Jan 1, 2024, 12:08:31 AM GMT+8
Scan Duration	5 hours, 42 minutes
Requests	706999
Average Response Time	32ms
Maximum Response Time	26841ms
Application Build	v23.7.230728157

Cross site scripting

Cross-site Scripting (XSS) refers to client-side code injection attack wherein an attacker can execute malicious scripts into a legitimate website or web application. XSS occurs when a web application makes use of unvalidated or unencoded user input within the output it generates.

Impact

Malicious JavaScript has access to all the same objects as the rest of the web page, including access to cookies and local storage, which are often used to store session tokens. If an attacker can obtain a user's session cookie, they can then impersonate that user.

Furthermore, JavaScript can read and make arbitrary modifications to the contents of a page being displayed to a user. Therefore, XSS in conjunction with some clever social engineering opens up a lot of possibilities for an attacker.

<https://habigonjzilasamiti.ssbbmultiservices.com/index.php/subscribe-register-form>

URL encoded GET input **plan** was set to **0 onmouseover=mJAD(99056) y=**

The input is reflected inside a tag parameter without quotes.

Request

```
GET /index.php/subscribe-register-form?plan=0%20onmouseover=mJAD(99056)%20y= HTTP/1.1

Dotenv .env file

A dotenv file (`.env`) was found in this directory. Dotenv files are used to load environment variables from a `.env` file into the running process.

This file may expose sensitive information that could help a malicious user to prepare more advanced attacks. It's recommended to remove or restrict access to this type of files from production systems.

Impact

These files may disclose sensitive information. This information can be used to launch further attacks.

Host: habigonjzilasamiti.ssbbmultiservices.com
Connection: Keep-alive
```

Recommendation

Remove or restrict access to all configuration files accessible from internet.

Possible database backup

Manual confirmation is required for this alert.

One or more possible database backups were identified. A database backup contains a record of the table structure and/or the data from a database and is usually in the form of a list of SQL statements. A database backup is most often used for backing up a database so that its contents can be restored in the event of data loss. This information is highly sensitive and should never be found on a production system.

Impact

These file(s) may disclose sensitive information. This information can be used to launch further attacks.

<https://habigonjzilasamiti.ssbbmultiservices.com/>

Pages with possible database backups:

- <https://habigonjzilasamiti.ssbbmultiservices.com/sql/laravel-habiganj.sql>
DROP TABLE

Request

```

Host: habigonjzilasamiti.ssbbmultiservices.com
Connection: Keep-alive
```

Recommendation

Sensitive files such as database backups should never be stored in a directory that is accessible to the web server. As a workaround, you could restrict access to these file(s).

Application error messages

This alert requires manual confirmation

Acunetix found one or more error/warning messages. Application error or warning messages may expose sensitive information about an application's internal workings to an attacker. These messages may also contain the location of the file that produced an unhandled exception. Consult the 'Attack details' section for more information about the affected page(s).

Impact

Error messages may disclose sensitive information which can be used to escalate attacks.

Development configuration files

One or more configuration files (e.g. Vagrantfile, Gemfile, Rakefile, ...) were found. These files may expose sensitive information that could help a malicious user to prepare more advanced attacks. It's recommended to remove or restrict access to this type of files from production systems.

Impact

These files may disclose sensitive information. This information can be used to launch further attacks.

<https://habigonjzilasamiti.ssbumultiservices.com/>

Development configuration files:

- <https://habigonjzilasamiti.ssbumultiservices.com/package.json>

package.json => Grunt configuration file. Grunt is a JavaScript task runner.

- <https://habigonjzilasamiti.ssbumultiservices.com/composer.json>

composer.json => Composer configuration file. Composer is a dependency manager for PHP.

- <https://habigonjzilasamiti.ssbumultiservices.com/composer.lock>

composer.lock => Composer lock file. Composer is a dependency manager for PHP.

- <https://habigonjzilasamiti.ssbumultiservices.com/package-lock.json>

package-lock.json => npm file. This file keeps track of the exact version of every package that is installed.

- <https://habigonjzilasamiti.ssbumultiservices.com/.styleci.yml>

.styleci.yml => StyleCI configuration file

Request

```

Recommendation

Remove or restrict access to all configuration files accessible from internet.

Directory listings

Directory listing is a web server function that displays the directory contents when there is no index file in a specific website directory. It is dangerous to leave this function turned on for the web server because it leads to information disclosure.

Impact

A user can view a list of all files from the affected directories possibly exposing sensitive information.

Laravel log file publicly accessible

Laravel is a popular PHP web application framework. A publicly accessible Laravel log file (`/storage/logs/laravel.log`) was found in this directory.

This file may expose sensitive information that could help a malicious user to prepare more advanced attacks. It's recommended to remove or restrict access to this type of files from production systems.

Impact

The Laravel log file may disclose sensitive information. This information can be used to launch further attacks.

<https://habigonjzilasamiti.ssbmultiservices.com/>

Vulnerable package dependencies [medium]

One or more packages that are used in your web application are affected by known vulnerabilities. Please consult the details section for more information about each affected package.

Impact

The impact of this vulnerability is different for each vulnerable package. It's recommended to investigate each vulnerable package individually.

<https://habigonjzilasamiti.ssbbmultiservices.com/>

List of vulnerable composer packages:

Package: league/commonmark

Version: dev-main

CVE: CVE-2019-10010

Title: Improper Neutralization of Input During Web Page Generation ('Cross-site Scripting')

Description: Cross-site scripting (XSS) vulnerability in the PHP League CommonMark library before 0.18.3 allows remote attackers to insert unsafe links into HTML by using double-encoded HTML entities that are not properly escaped during rendering, a different vulnerability than CVE-2018-20583.

CVSS V2: AV:N/AC:M/Au:N/C:N/I:P/A:N

CVSS V3: CVSS:3.0/AV:N/AC:L/PR:N/UI:R/S:C/C:L/I:L/A:N

References:

- <https://github.com/theophpleague/commonmark/releases/tag/0.18.3>
- <https://github.com/theophpleague/commonmark/issues/353>

Recommendation

It's recommended to update the vulnerable packages to the latest version (if a fix exists). If a fix does not exist, you may want to suggest changes that address the vulnerability to the package maintainer or remove the package from your dependency tree.

Clickjacking: X-Frame-Options header

Clickjacking (User Interface redress attack, UI redress attack, UI redressing) is a malicious technique of tricking a Web user into clicking on something different from what the user perceives they are clicking on, thus potentially revealing confidential information or taking control of their computer while clicking on seemingly innocuous web pages.

The server did not return an **X-Frame-Options** header with the value DENY or SAMEORIGIN, which means that this website could be at risk of a clickjacking attack. The X-Frame-Options HTTP response header can be used to indicate whether or not a browser should be allowed to render a page inside a frame or iframe. Sites can use this to avoid clickjacking attacks, by ensuring that their content is not embedded into untrusted sites.

Impact

The impact depends on the affected web application.

Connection: Keep-alive
```

Recommendation

Configure your web server to include an X-Frame-Options header and a CSP header with frame-ancestors directive. Consult Web references for more information about the possible values for this header.

Composer installed.json publicly accessible

A **installed.json** file was discovered. Composer is a tool for dependency management in PHP. It allows you to declare the libraries your project depends on and it will manage (install/update) them for you. After installing the dependencies, Composer stores the list of them in a special file for internal purposes.

As the file is publicly accessible, it leads to disclosure of information about components used by the web application.

Impact

installed.json discloses sensitive information. This information can be used to launch further attacks.

Cookies with missing, inconsistent or contradictory properties

At least one of the following cookies properties causes the cookie to be invalid or incompatible with either a different property of the same cookie, or with the environment the cookie is being used in. Although this is not a vulnerability in itself, it will likely lead to unexpected behavior by the application, which in turn may cause secondary security issues.

Impact

Cookies will not be stored, or submitted, by web browsers.

[https://habigonjzilasamiti\(ssbmultiservices.com\)/](https://habigonjzilasamiti(ssbmultiservices.com)/)

Cookies without HttpOnly flag set

One or more cookies don't have the HttpOnly flag set. When a cookie is set with the HttpOnly flag, it instructs the browser that the cookie can only be accessed by the server and not by client-side scripts. This is an important security protection for session cookies.

Impact

Cookies can be accessed by client-side scripts.

Recommendation

If possible, you should set the HttpOnly flag for these cookies.

Cookies without Secure flag set

One or more cookies does not have the Secure flag set. When a cookie is set with the Secure flag, it instructs the browser that the cookie can only be accessed over secure SSL/TLS channels. This is an

important security protection for session cookies.

Impact

Cookies could be sent over unencrypted channels.

<https://habigonjzilasamiti.ssbumultiservices.com/>

Verified

Recommendation

If possible, you should set the Secure flag for these cookies.

Documentation files

One or more documentation files (e.g. `readme.txt`, `changelog.txt`, ...) were found. The information contained in these files could help an attacker identify the web application you are using and sometimes the version of the application. It's recommended to remove these files from production systems.

Impact

These files may disclose sensitive information. This information can be used to launch further attacks.

```

Recommendation

Remove or restrict access to all documentation file accessible from internet.

HTTP Strict Transport Security (HSTS) not implemented

HTTP Strict Transport Security (HSTS) tells a browser that a web site is only accessible using HTTPS. It was detected that your web application doesn't implement HTTP Strict Transport Security (HSTS) as the Strict Transport Security header is missing from the response.

Impact

HSTS can be used to prevent and/or mitigate some types of man-in-the-middle (MitM) attacks

<https://habigonjzilasamiti.ssbumultiservices.com/>

URLs where HSTS is not enabled:

Strict-Transport-Security

<https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Strict-Transport-Security>

Insecure Inline Frame (iframe)

The web page was found to be using an Inline Frame ("iframe") to embed a resource, such as a different web page. The Inline Frame is either configured insecurely, or not as securely as expected. This vulnerability alert is based on the origin of the embedded resource and the iframe's sandbox attribute, which can be used to apply security restrictions as well as exceptions to these restrictions.

Impact

When a web page uses an insecurely configured iframe to embed another web page, the latter may manipulate the former, and trick its visitors into performing unwanted actions.

<https://habigonjzilasamiti.ssbbmultiservices.com/>

Verified

An iframe tag references an external resource, and no sandbox attribute is set.

Request

```
GET / HTTP/1.1
Referer: https://habigonjzilasamiti.ssbbmultiservices.com/
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8
Accept-Encoding: gzip,deflate,br
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko)

Recommendation

Review the iframe's purpose and environment, and use the sandbox attribute to secure the iframe while applying sandbox directives to ease security restrictions if necessary.

Possible sensitive directories

One or more possibly sensitive directories were found. These resources are not directly linked from the website. This check looks for common sensitive resources like backup directories, database dumps, administration pages, temporary directories. Each one of these directories could help an attacker to learn more about his target.

Impact

These directories may expose sensitive information that could help a malicious user to prepare more advanced attacks.

<https://habigonjzilasamiti.ssbbmultiservices.com/>

Possible sensitive directories:

[Web Server Security and Database Server Security](#)

<https://www.acunetix.com/websitesecurity/webserver-security/>

Content Security Policy (CSP) not implemented

Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks.

Content Security Policy (CSP) can be implemented by adding a **Content-Security-Policy** header. The value of this header is a string containing the policy directives describing your Content Security Policy. To implement CSP, you should define lists of allowed origins for all of the types of resources that your site utilizes. For example, if you have a simple site that needs to load scripts, stylesheets, and images

hosted locally, as well as from the jQuery library from their CDN, the CSP header could look like the following:

Content-Security-Policy:

```
default-src 'self';  
script-src 'self' https://code.jquery.com;
```

It was detected that your web application doesn't implement Content Security Policy (CSP) as the CSP header is missing from the response. It's recommended to implement Content Security Policy (CSP) into your web application.

Impact

CSP can be used to prevent and/or mitigate attacks that involve content/code injection, such as cross-site scripting/XSS attacks, attacks that require embedding a malicious resource, attacks that involve malicious use of iframes, such as clickjacking attacks, and others.

Connection: Keep-alive
```

Recommendation

It's recommended to implement Content Security Policy (CSP) into your web application. Configuring Content Security Policy involves adding the **Content-Security-Policy** HTTP header to a web page and giving it values to control resources the user agent is allowed to load for that page.

Content type is not specified

These page(s) does not set a Content-Type header value. This value informs the browser what kind of data to expect. If this header is missing, the browser may incorrectly handle the data. This could lead to security problems.

Impact

None

Recommendation

Set a Content-Type header value for these page(s).

Email addresses

One or more email addresses have been found on this website. The majority of spam comes from email addresses harvested off the internet. The spam-bots (also known as email harvesters and email extractors) are programs that scour the internet looking for email addresses on any website they come across. Spambot programs look for strings like myname@mydomain.com and then record any addresses found.

Impact

Email addresses posted on Web sites may attract spam.

File uploads

These pages allows visitors to upload files to the server. Various web applications allow users to upload files (such as pictures, images, sounds, ...). Uploaded files may pose a significant risk if not handled correctly. A remote attacker could send a multipart/form-data POST request with a specially-crafted filename or mime type and execute arbitrary code.

Impact

If the uploaded files are not safely checked an attacker may upload malicious files.

Connection: Keep-alive
```

Recommendation

Restrict file types accepted for upload: check the file extension and only allow certain files to be uploaded. Use a whitelist approach instead of a blacklist. Check for double extensions such as .php.png. Check for files without a filename like .htaccess (on ASP.NET, check for configuration files like web.config). Change the permissions on the upload folder so the files within it are not executable. If possible, rename the files that are uploaded.

Outdated JavaScript libraries

You are using an outdated version of one or more JavaScript libraries. A more recent version is available. Although your version was not found to be affected by any security vulnerabilities, it is recommended to keep libraries up to date.

Impact

Reverse proxy detected

This server uses a reverse proxy, a load balancer or a CDN (Content Delivery Network) or it's hosted in a cloud provider. Acunetix detected this by sending various payloads and detecting changes in headers and body.

Impact

No impact is associated with this vulnerability.

<https://habigonjzilasamiti.ssbbmultiservices.com/>

Detected reverse proxy: Apache httpd

Request

```
GET / HTTP/1.1
Max-Forwards: 0
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8
Accept-Encoding: gzip,deflate,br

Chrome/114.0.0.0 Safari/537.36
Host: habigonjzilasamiti.ssbbmultiservices.com
Connection: Keep-alive
```

Recommendation

None

Subresource Integrity (SRI) not implemented

Subresource Integrity (SRI) is a security feature that enables browsers to verify that third-party resources they fetch (for example, from a CDN) are delivered without unexpected manipulation. It works by allowing developers to provide a cryptographic hash that a fetched file must match.

Third-party resources (such as scripts and stylesheets) can be manipulated. An attacker that has access or has hacked the hosting CDN can manipulate or replace the files. SRI allows developers to specify a base64-encoded cryptographic hash of the resource to be loaded. The integrity attribute containing the hash is then added to the <script> HTML element tag. The integrity string consists of a base64-encoded hash, followed by a prefix that depends on the hash algorithm. This prefix can either be sha256, sha384 or sha512.

The script loaded from the external URL specified in the Details section doesn't implement Subresource Integrity (SRI). It's recommended to implement Subresource Integrity (SRI) for all the scripts loaded from external hosts.

Impact

An attacker that has access or has hacked the hosting CDN can manipulate or replace the files.

Connection: Keep-alive

Recommendation

Use the SRI Hash Generator link (from the References section) to generate a <script> element that implements Subresource Integrity (SRI).

For example, you can use the following <script> element to tell a browser that before executing the https://example.com/example-framework.js script, the browser must first compare the script to the expected hash, and verify that there's a match.

```
<script src="https://example.com/example-framework.js"  
integrity="sha384-oqVuAfXRKap7fdgcCY5uykM6+R9GqQ8K/uxy9rx7HNQlGYl1kPzQho1wx4JwY8wC"  
crossorigin="anonymous"></script>
```
